Subject: RAS Server

Hi [REDACTED]

for the RAS Server you need:

- 1.-Telephone cable modem (HW).
- 2.-512 Mb of RAM, +10 GB HDD, any processor produced from 2004 to this day (HW).
- 3.-Windows 2003 server (OS).
- 4.-Enable and configure the RRAS service (procedure).

Best regards,

Fernando Hernández

Subject: RE: Reporting tool

The reporting tool is difficult to understand. The interface isn't clear and the installation is worse. I'm going through the Operator's Guide and trying to write down where it isn't clear and I'm going to try to get with him sometime today to go over all the pieces.

Honestly, when I'm done with AZ, all I know to work on is trying to prepare machines for the HAAT Listener and the RAS Server we need for Wisconsin. That's going to be a major project.

RE: RAS Server

Fernando,

Thanks for the information. I have a question, how do I complete number 4?

Thanks,

Sorry, I don't know.

For sure, the new IT guy working here in the Denver office will know.

Best regards!

Attachments: RAS Server; RE: Hardware and Software Specs

I've attached the 2 emails from Fernando addressing these issues. It looks like a D610 laptop or comparable will work for both the HAAT Listener and RAS servers. Do we have or can we get SUSE Linux 9.3?
